Skilled Group selects 22 celluveyor for innovative automation solution in Poland

Bremen, 06.01.2026 - The Skilled Group from Italy has chosen the German technology provider cellumation for the first time to implement a challenging customer project in Poland.

With limited space and high demands on performance and automation, the search for new solutions is essential. The Skilled Group, a leading automation specialist from Italy, has discovered the expertise of cellumation from Bremen for its requirements.

The decision to work together was made after a visit to the Bremen site and extensive product tests. In the third quarter of 2025, 22 cv.GO's will now be integrated at the end customer's site to efficiently orientate objects for palletizing. In order to meet the customer's requirement for high throughput rates before layer palletizing, the Skilled Group has selected the purely electrically powered cv.GO for 90 and 180 degree rotations.

The cv.GO from cellumation is characterized by its compactness, efficiency and robustness. Its omnidirectional, independently driven wheels enable various movements in one component and replace conventional turning stations with powerful rotation.

Dr. Hendrik Thamer, Co-Founder and CEO of cellumation, comments on the cooperation: "We are delighted to have found another powerful partner in Europe in the Skilled Group. The potential - especially of palletizing solutions - in combination with many years of integration experience is a win-win situation: La soluzione perfetta."

About cellumation GmbH

Founded in 2017, cellumation GmbH develops and manufactures intelligent modular technologies for automated material flow. The intelligent software brings hexagonal robot cells (the celluveyor) to life in the smallest of spaces. The cells can be assembled into any layout, handle complex conveying tasks and transport different goods without changeover times. The company's vision: in future, every parcel delivered worldwide should have touched a cellumation cell. To achieve this goal, over 70 employees from 13 nations work, develop, grow and produce hand-in-hand at the Bremen site.
